

EMERGENCY VEHICLE BRIDGE POSTINGS

- 1) Due to a FHWA mandate all Counties are now required to load rate their bridges for a variety of new load cases including two Emergency Vehicle Configurations.
- 2) We have five (5) bridges within Tippecanoe County that qualify for emergency vehicle posting under this new mandate.
- 3) Local Fire departments have been notified of the upcoming postings.
- 4) The Emergency Vehicle configurations provide for very short wheel bases (15 to 17 feet) with one front axle and one rear axle (EV2) or two heavy rear axles (EV3).
- 5) **These postings do not affect any other road legal truck loadings** (only the noted EV2 and EV3 Emergency Vehicle configurations).
